=====
Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5(a)(1)(v)).

In the listing above, the "SU" designation means that rates listed under that identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U. S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U. S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

4.) All decisions by the Administrative Review Board are final.

END OF GENERAL DECISION

explorations. Explorations 46 and 47 were drilled at the east end of building 831, within the footprint of the building. Test hole 46 was drilled to 6.10 meters, hole 47 was drilled to 4.57 meters. The test hole locations are about 40 meters from the proposed New Barracks building site. The holes were drilled on September 8, 1983.

The building site is steep and overgrown with large trees and brush. Standard penetration tests were performed at 0.61-meter intervals. At exploration site 46, a surficial layer of silty sand, SM, is present to a depth of 0.46 m. At hole 47, a 0.61-m layer of silty sand was encountered. Weathered granite underlies the soils. The granite is massive, and highly to moderately weathered. The highly weathered zone is present to approximately 4.6 meters and is characterized by friable rock of low hardness, occasionally becoming soft with medium plasticity fines. At exploration 47, from 2.44 to 2.74 m, the material classified as clayey sand, SC. The rock underlying the highly weathered zone is moderately weathered and moderately hard. Free water was not encountered at either test hole.

The materials are firm to very dense. At test hole 46, blow counts ranged from 23 at 5.8 m to 66 at 0.3 m deep. At test hole 47, blow counts ranged from 15 at 3.7 m, to 45 at 1.8 m.

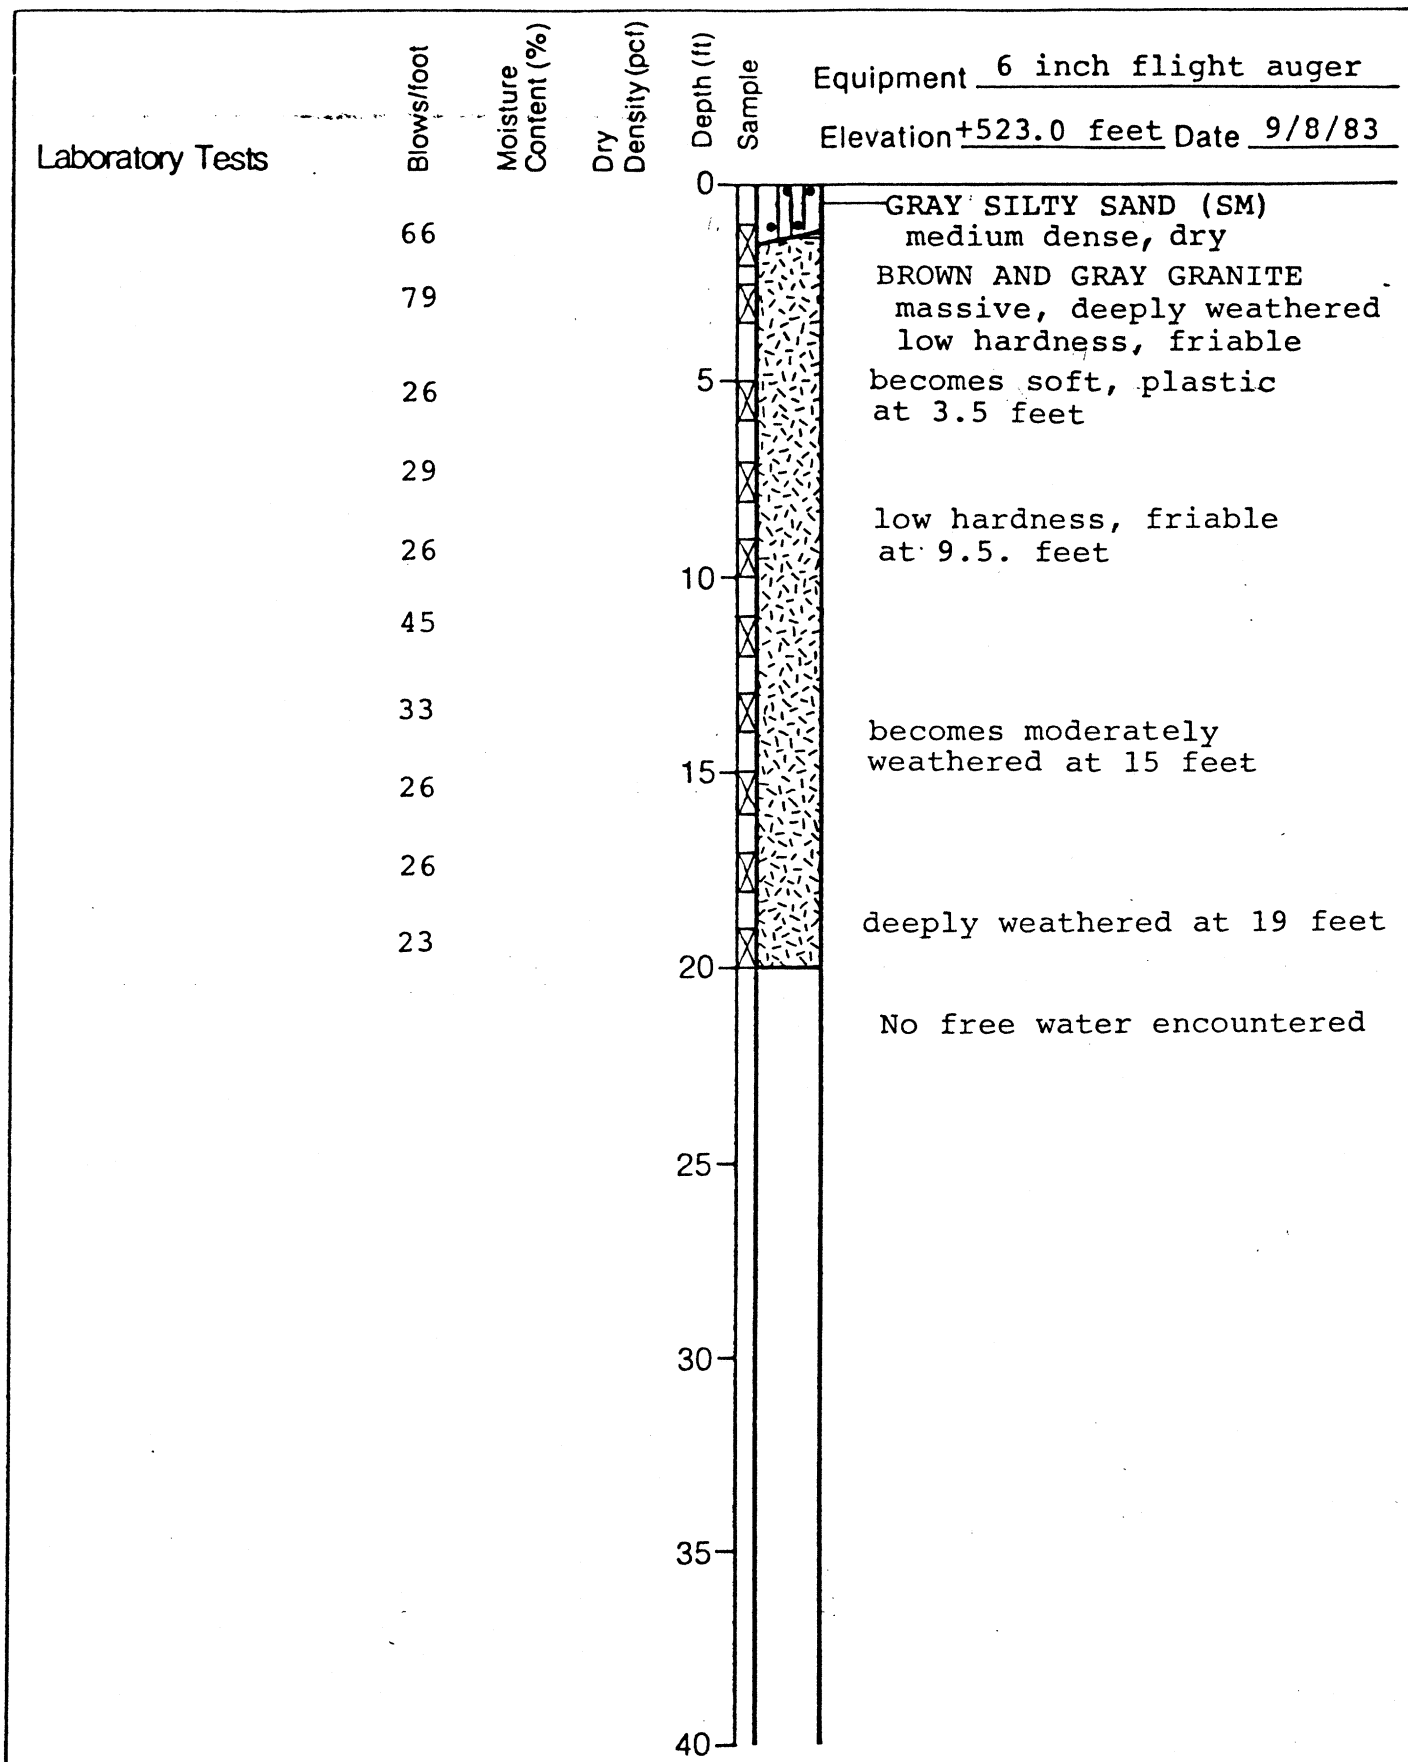

In this geologic environment the boundary between soil and weathered rock is not clearly defined. The degree of weathering varies considerably horizontally and with depth. The subsurface profile will be irregular and it is not unusual to encounter lenses, ledges or boulder-size blocks of hard rock within the soil mantle. Previous explorations in the vicinity of this project encountered rock of various degrees of weathering, primarily severely weathered. The likelihood of encountering less weathered rock increases with depth. **See Attached Log Borings.**

- 2.1.3 Soil Parameters:** Use the following soil parameters to design buried structures and earth retaining walls in properly compacted satisfactory or select material:

	Compacted Material
Moist Unit Weight of Soil, γ_m :	20.4 kN/m ³ (130 PCF)
Angle of Internal Friction, f :	35°
K_a (Coefficient of Active Earth Pressure):	0.27
K_p (Coefficient of Passive Earth Pressure):	3.69
K_o (Coefficient of At-Rest Earth Pressure):	0.43
Coefficient of Soil-Concrete Friction, μ :	0.47

Provide drainage from behind retaining walls.

- 2.1.3.1 Satisfactory Material** includes minus 50-mm material that classifies according to ASTM D 2487 as GW, GP, GC, GM, SW, SP, SC, SM, ML, CL, and combinations of these materials, (such as SP-SM, etc.) In addition, satisfactory material should be free of boulders, cobbles, debris and organic material.
